

Muhammad Tayyab Bahaud Din

Senior Flutter & AI Engineer

Islamabad, Pakistan (open to remote) · mtbahauddin@gmail.com · linkedin.com/in/tayyyab · github.com/tayyyab · portfolio.mtbahauddin.com

SUMMARY

Software Engineer with 6+ years of experience architecting high-performance, cross-platform mobile applications for iOS and Android with Flutter. Led mobile teams, designed modular architectures, and owned CI/CD and App Store / Google Play release lifecycles. Current focus is AI-driven development: LLM orchestration, retrieval-augmented generation (RAG) and agentic workflows, integrating Flutter front ends with Python and FastAPI back ends. Microsoft Certified: Azure AI Fundamentals.

SKILLS

- Mobile:** Flutter, Dart, iOS, Android, Kotlin, Swift, React Native, platform channels
- Architecture & state:** Riverpod, BLoC, clean architecture, modular design, test-driven development (TDD), performance optimisation
- AI & ML:** LLM integration and orchestration, RAG, agentic AI, machine learning, Azure AI
- Backend & data:** Python, FastAPI, Django REST Framework, PostgreSQL, Firebase, SQLite, Hive, Docker, REST APIs, WebSockets
- Integrations:** Stripe and payment gateways, Google Maps API, Firebase Cloud Messaging (FCM), POS thermal printing
- Delivery:** CI/CD, build flavors (Dev/QA/Prod), App Store Connect, Google Play Console, Git, Agile/Scrum, code review, team leadership

EXPERIENCE

Flutter Engineer — LogicEra (Cloud & AI Partner) Oct 2025 – Present
Dubai, United Arab Emirates · Remote · Full-time

- Build cross-platform Flutter applications for a cloud and AI solutions partner, with a focus on AI-driven development and agentic workflows.

Senior Software Engineer (Cross-Platform) — AI Taif Group Mar 2022 – Oct 2025
Islamabad, Pakistan · On-site · Full-time

- Led an engineering team architecting and scaling enterprise delivery and e-commerce applications serving thousands of active users.
- Designed modular application architectures from scratch, standardising state management, directory structures and design patterns across company repositories.
- Implemented automated CI/CD pipelines and multi-flavor environment configurations (Dev, QA, Production), reducing deployment errors and accelerating release frequency.
- Oversaw complete release lifecycles, managing App Store Connect and Google Play Console publishing pipelines, certificates and compliance.
- Conducted systematic code reviews and performance audits, optimising memory footprint and rendering performance for low-spec mobile hardware.

Software Engineer (Flutter) — Turing Aug 2023 – Dec 2023
Remote · Part-time

- Engineered full-stack marketplace features using Python, Django REST Framework, Docker and PostgreSQL for secure, scalable back-end services.
- Configured multi-environment build systems (flavors) and CI/CD automation pipelines to streamline cross-team development and staging workflows.
- Implemented reactive state management architectures (Riverpod) for highly responsive user interfaces with complex data-syncing needs.
- Executed performance optimisations to maximise thread efficiency, reduce battery consumption and streamline network requests.

Full-time

- Developed cross-platform client systems using Flutter and React Native, delivering native-grade applications across iOS and Android.
- Integrated hardware and platform features, including POS thermal printing via native method channels.
- Engineered real-time messaging, payment processing and location services using WebSockets, Stripe/payment gateways and the Google Maps API.
- Implemented Firebase Cloud Messaging (FCM) for targeted push notifications and REST API integrations for secure data exchange.
- Managed end-to-end store publishing pipelines in line with Apple and Google developer guidelines.

Software Engineer (Flutter) — EmCentrix

Nov 2019 – Apr 2021

On-site · Full-time

- Practised test-driven development (TDD) and designed automated testing suites to enforce quality before production releases.
- Established early CI/CD automation pipelines to streamline application build, test and distribution workflows.
- Spearheaded greenfield Flutter development while refactoring legacy native Android codebases into modern architectures.
- Collaborated with UI/UX designers and back-end teams in an Agile/Scrum environment to turn design specs into production code.

SELECTED PROJECTS

Ticket Wallet — iOS & Android (Flutter)

- Real-time marketplace for sports and event tickets with AI-assisted listing and pricing and cross-marketplace price comparison; rated 4.8 on the Apple App Store.

TFM Courier 2 — Android (Flutter)

- Field operations app for delivery riders: shipment scanning, location tracking and offline-tolerant sync; 5,000+ installs, rated 4.4 on Google Play.

TFM Shipper 2 — Android (Flutter)

- Customer shipping app for account sign-up, parcel collection booking, shipment tracking and support requests; rated 4.4 on Google Play.

Recall App — Android (Flutter, personal product)

- Offline-first tracker for movies, anime, manga and books built with BLoC and Hive; designed, developed and published solo.

EDUCATION

Bachelor's degree, Computer Science — Qurtuba University of Science and Information Technology

2015 – 2019

CERTIFICATIONS

- Microsoft Certified: Azure AI Fundamentals — Microsoft, Aug 2026 (Credential ID 89675DE221E0644)
- Supervised Machine Learning: Regression and Classification — DeepLearning.AI & Stanford University (Coursera)
- Advanced Learning Algorithms — DeepLearning.AI & Stanford University (Coursera)
- Unsupervised Learning, Recommenders, Reinforcement Learning — DeepLearning.AI & Stanford University (Coursera)
